

PLYTANIUM™ PLYFRAME® PANELS

# FRAME WITH STRENGTH

BUILD IT BETTER™

## Features and benefits

- Ideally suited for upholstered furniture framing
- Laminated veneer panels available in soft hardwood (poplar/gum) or Southern Pine construction
- Tighter core gap restrictions ensure excellent frame quality
- Panel constructions are available with parallel center plies for better screw-holding ability
- Custom industrial panels are available to meet specific needs

## Sizes

- 4' x 8' panels available in thicknesses ranging from 15/32" to 1-1/8" with up to 9 plies

*strong*

*versatile*

*proven*

# Performance and value for furniture framing

Sturdy, comfortable upholstered furniture begins with a sound foundation. Plytanium PlyFrame, a specially engineered laminated veneer panel, is ideal for upholstered furniture framing applications, whether you're building recliners, sofas or other upholstered furniture.

## The most dependable choice

Durable, APA-rated Plytanium PlyFrame panels meet your demands for quality in an easy-to-work-with material. Plytanium PlyFrame panels are made from soft hardwood (Poplar/Gum) or Southern Pine. Special core construction is designed to limit core gaps to 1/2" or less to improve the quality of your product line. Custom inner plies with two- or three-piece centers grip screws securely for added strength. Best of all, consistent quality reduces waste and allows maximum utilization of each panel.

## Proven performance

As a dedicated supplier, GP understands your demand for a consistent, high quality framing material that arrives when you need it, ready for your manufacturing process. Plytanium PlyFrame has been manufactured to meet the specifications of the furniture industry since 1988. Plywood, with a 50-year history of performance, provides greater reliability than most other structural panels available today.

## Reliable, just-in-time delivery

GP, the nation's leading supplier of structural panels, manufactures Plytanium PlyFrame panels at eleven facilities around the country. Our extensive distribution network means you can rely on us for efficient, dependable "just in time" delivery.

To speak with your local Georgia-Pacific representative call **1-800-839-2588** (Eastern) or **1-800-830-7370** (Western). For more information about PlyFrame panels visit our website at [www.gpplytanium.com](http://www.gpplytanium.com).

**Note:** Customers are advised to conduct their own tests to determine suitability of product for their specific end use. When ripped into narrow strips, consideration should be given to the effect of isolating allowable panel characteristics and their effect on structural capability. For technical assistance on any fabrication problem, or for questions on potential development, please contact your GP representative.
