

BETTER STORM

AND HAIL RESISTANCE THAN EVER BEFORE

Since its invention in 1987, DensDeck® Roof Boards continue to set new performance standards for roof assemblies. A dedication to advancement continues to bring new innovations to a product line with a noble history. DensDeck® StormX™ Prime Roof Boards build on that legacy by innovating on impact resistance for the toughest cover board yet—to face today's most severe hail needs.

**DENTS & DAMAGE FROM
THE MOST EXTREME HAIL**

**PUNCTURE
FROM DEBRIS**

**INCREASED MOISTURE
RESISTANCE TO ABSORPTION**

YOUR ROOF'S BEST HAIL DEFENSE

Roof resiliency has never been more important. As weather events intensify across the United States, roof system designs and material installation must adapt too. DensDeck® StormX™ Prime Roof Boards help prepare commercial rooftops to hold tough under today's severe weather conditions.

STAND UP TO SEVERE HAIL CONDITIONS

When you're looking for the best defense for your roof assembly designs, there's only one cover board to consider. DensDeck® StormX™ Prime Roof Boards incorporate increased moisture resistance and strength, as well as preeminent impact resistance in one multi-use roof board. It is classified by FM (Factory Mutual) Global for VSH (very severe hail), the tough new hail standard in FM Property Loss Prevention Data Sheet 1-34.⁽¹⁾ Specify DensDeck® StormX™ cover boards wherever you need enhanced impact resistance, but always specify it in very severe hail zones.

DensDeck® StormX™ cover boards help today's commercial buildings stand strong against extreme storm conditions.

ULTIMATE HAIL DEFENSE

PREEMINENT IMPACT RESISTANCE

INCREASED MOISTURE RESISTANCE

FM GLOBAL'S TEST REQUIREMENTS FOR VERY SEVERE HAIL (VSH) RATING

DensDeck® StormX™ Roof Boards are classified by FM Global for VSH (very severe hail), the tough new hail standard in FM Property Loss Prevention Data Sheet 1-34. It's your go-to roof risk mitigator for buildings in the very severe hail areas of the central United States and anywhere severe hail (2 inches or larger) is a concern.

WEATHER SEVERE HAILSTORMS

DensDeck® StormX™ cover boards are classified by FM Global for VSH standards for impact resistance, using engineering ingenuity to help reduce roof assembly storm damage.

It is your go-to roof risk mitigator for buildings in the very severe hail zones across Arkansas, Colorado, Iowa, Kansas, Minnesota, Missouri, Montana, Nebraska, New Mexico, North Dakota, South Dakota, Oklahoma, Texas, and Wyoming.

LESS MOISTURE

DensDeck® StormX™ cover boards build extra puncture durability on top of DensDeck® Prime's EONIC™ Technology—including 5% total water resistance by weight and 1-gram surface water absorption performance at its baseline. Whether your roof needs protection from moisture, debris, or the onslaught of hail up to very severe conditions, DensDeck® StormX™ roof boards redefine resistance and stand up to attack.

FM GLOBAL HAIL SIZE COMPARISON

FM Global tests roof systems for moderate and severe hail impact resistance based on how well they withstand the impact of a 2-inch diameter 1.19-pound steel ball dropped from either 81 inches or 141.5 inches high, respectively. The new VSH designation uses an ice launcher to propel a 2-inch diameter laboratory-made ice ball at 152 to 160 feet per second. This applies impact.

1. Consult RoofNav for VSH assemblies with DensDeck StormX Prime Roof Boards.
